REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The claims are allowable over the prior art of record because the teachings of the references taken as a whole do not teach or render obvious the combination set forth, including that of an electric lock box having a controller circuit, a secure compartment having an access member actuated by a first movable latch member, a holding member actuated by a second movable latch member, a prime mover device, and a linear actuator where the controller circuit moves the linear actuator in a first direction by way of the prime mover device to release the access member, allowing access to the secure compartment, and the controller circuit also moves the linear actuator by way of the prime mover device in a second direction that is opposite of the first direction, to release the holding member, allowing the electronic lock box apparatus to be detached from a fixed object.

The closest prior art of record, U.S. Patent Number 4,838,052 to Williams et al., discloses an electronic lock box apparatus attachable to a fixed object, the electronic lock box apparatus comprising an electrical power source, a controller circuit, a secure compartment having an access member actuated by a first latch member, a holding member actuated by a second latch member, a prime mover device, and a linear actuator. However, Williams et al. does not, the control circuit being configured to move the linear actuator in a first direction by way of the prime mover device to release the access member, and the controller circuit also moves the linear actuator by way of the prime mover device in a second direction that is opposite of the first direction, to release the holding member, allowing the electronic lock box apparatus to be detached from a fixed object.
